HEMOGRAM

Haemogram/Complete Blood Count is a test panel that gives information about the components in the blood. High or low counts may indicate the presence of a disease.

RBC Count(Optical)

4.6 Million/ul

3.7 - 5.6 Million/ul Normal

Info- Red Blood Count is the amount of Red Blood Cells per unit of blood

WBC Count(Optical(Light scatter))

7.15 10³/mm³

4 - 11 10³/mm³ Normal

Info- Leucocytes also known as white blood cells (WBCs) are colourless cells that circulate in the blood and lymph and have major contribution towards Immune system

Platelet Count(Optical(Light scatter))

420 10³/mm³

150 - 450 10³/mm³ Normal

Info- Platelets, or thrombocytes, are small, colourless cells that prevent bleeding and initiate clot formation.

Hemoglobin (Modified Cyanmethaemoglobin)

10.9 gm/dl

11.5 - 16.5 gm/dl Normal

Info- Hemoglobin is a protein found in the red blood cells that carries oxygen to your body's organs and tissues and transports carbon dioxide from the organs and tissues back to the lungs.

Inference- Your Hemoglobin values denote Anemia. Contact Your Doctor for further details

Blood Indices

MCH(Calculated)	24 pg	26 - 32 pg	Normal
MCHC(Calculated)	29 g/dl	31 - 36 g/dl	Normal
MCV (Pulse height (Derived from RBC histogram))	83 fl	75 - 95 fl	Normal
RDW(Derived from RBC histogram)	16.3 %	11.6 - 14.5 %	Normal
Packed cell volume(Calculated)	38 %	37 - 47 %	Normal

Differential Leucocyte count

Neutrophils	57 %	40 - 80 %	Normal
Lymphocytes	32 %	20 - 40 %	Normal
Eosinophils	6 %	1 - 6 %	Normal
Monocytes	5 %	2 - 10 %	Normal

ESR (Automated - Westergren method)
60 mm/hr

Platelets:
Adequate On The Smear

RBC:
Predominantly Normocytic
Normochromic Rbcs Seen Along With Few Hypochromic Rbcs And Occasional Elliptocytes.

WBC:
Within Normal Limits

RPR test for syphilis - BLOOD
Non-Reactive

RA FACTOR
<11.2 IU/mL

Info- An RF test is used to help diagnose rheumatoid arthritis or other autoimmune disorders

TPHA-TREPONEMA PALLIDIUM
HEMAGGLUTINATION ASSAY
NEGATIVE
